LAB PROGRAM 4

4. Consider the schema for CompanyDatabase:

EMPLOYEE (SSN, Name, Address, Sex, Salary, DNo)
DEPARTMENT (DNo, DName, MgrSSN, MgrStartDate)
DLOCATION (DNo,DLoc)
PROJECT (PNo, PName, PLocation, DNo)
WORKS_ON (SSN, PNo, Hours)

Write the ER diagram and SQL queries to
1. Display the employee details whose salary is greater than 5 lakh , sorting the records in descending order of SSN.
2. Display the number of employees along with project names working on each project.
3. Show the resulting salaries if every employee working on the 'IOT' project is given a 10 percent raise.
4. Find the sum of the salaries of all employees of the 'Dept2' department, as well as the maximum salary, the minimum salary, and the average salary in this department
5. For each department that has more than two employees, retrieve the department number and the number of its employees who are making more than Rs. 6,00,000.
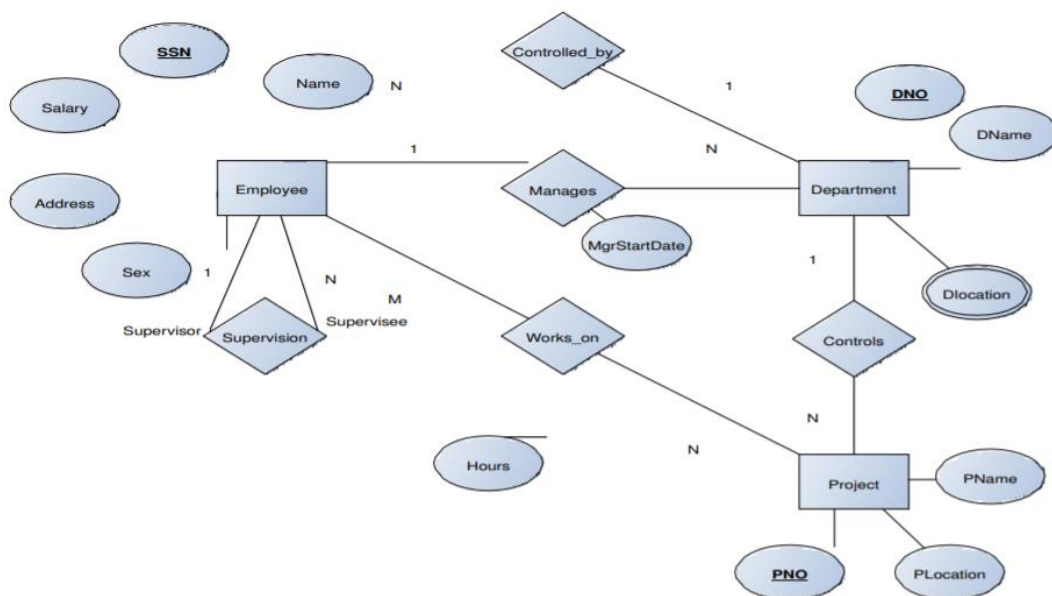

CREATE TABLE DEPARTMENT
